

Why Us?

We use superior materials along with experienced craftsmen to offer you a great value. We custom-design and install heavy duty cabinets that are “built tuff to store your stuff”.

Superior Construction

Dado joints are used for better construction and integrity. Cabinets are dadoed, pre-drilled, glued and screwed together. This is more costly and time consuming than other methods, but it makes a much stronger cabinet. Shelf stiffeners are added to wide shelves for heavier loads and 1/4” backs on all cabinets for added strength.

Superior Material

Full extension drawer slides allow the entire drawer to extend beyond the cabinet. 3/4” MDF panels are used because garage cabinets are exposed to moisture and heavier loads. Thermo-fused melamine is highly resistant to moisture, stains, and scuffing, with superior durability and wear resistance

Custom Colors

Melamine colors are available in solid colors: White or Light Gray. Laminated work tops – Stone Graftix and Graphite Graftix. Custom Colors – Hundreds of other colors are available on request.
